

Project Design Phase-II

Data Flow Diagram&User Stories

Date	01 October 2026
Team ID	SWTJD-2026-8514
Project Name	Implement Client Script&UI Policy (Incident)
Maximum Marks	4 Marks

Team Details

Role	Name / Value
Team Size	5
Team Leader	DHIVA DHARSHINI R
Team Member	DIVYALAKSHMI R
Team Member	GAYATHRI S
Team Member	GUNASUNDARI SIVAKUMAR
Team Member	HARINI M

Data Flow Diagram (DFD) – Incident Management: Client Script & UI Policy

External Entity / Input	Process	Data / Output
ServiceNow User (Caller / Agent)	Incident Form (Client Script + UI Policy)	Validated / Controlled Incident Form
Incident Form Data	Client Script (onChange / onLoad / onSubmit)	Dynamic field values&validation messages
User Field Selection	UI Policy (Conditions&Actions)	Fields visible / mandatory / read-only
ServiceNow Platform	Incident Record Processing	Updated Incident Record

User Stories – Use cases for the Incident form

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
ServiceNow User	Incident Form	USN-1	As a user, I want the Incident form to dynamically control fields based on selected values.	Relevant fields change automatically according to configured conditions.	High	Sprint-1
ServiceNow User	Client Script	USN-2	As a user, I want client-side validation when entering or changing Incident field values.	Invalid values are prevented or a clear validation message is shown.	High	Sprint-1
ServiceNow User	UI Policy	USN-3	As a user, I want fields to become mandatory, visible, or read-only when conditions are met.	Configured UI Policy actions are applied immediately on the Incident form.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Incident Agent	Incident Management	USN-4	As an agent, I want the Incident form to guide me to enter complete and valid information.	Required information is captured before submission.	Medium	Sprint-1
ServiceNow Admin	Configuration	USN-5	As an administrator, I want Client Scripts and UI Policies to be configurable and maintainable.	Scripts and policies can be tested and updated without changing unrelated records.	Medium	Sprint-2

Project Design Phase-II

Technology Stack (Architecture&Stack)

Date	01 October 2026
Team ID	SWTJD-2026-8514
Project Name	Implement Client Script&UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture – Proposed architecture for implementing Client Script and UI Policy in ServiceNow Incident Management.

Layer / Component	Technology / Service	Purpose
User Interface	ServiceNow Incident Form / Now Experience UI	Users create and update Incident records.
Client-side Logic	ServiceNow Client Script (JavaScript)	Dynamic validation, field changes and form behavior.
UI Configuration	ServiceNow UI Policy	Controls field visibility, mandatory state and read-only state.
Application Platform	ServiceNow Platform	Hosts Incident application, scripts, policies and workflows.
Database	ServiceNow Platform Database	Stores Incident records, users and configuration data.
Security	ServiceNow ACLs / Roles	Controls access to Incident data and configuration.

Table-1: Components&Technologies

S.No	Component	Description	Technology
1	User Interface	Incident form through which users interact with the application.	ServiceNow UI / Now Platform
2	Application Logic-1	Client-side logic for Incident form behavior and validation.	Client Script / JavaScript
3	Application Logic-2	Conditional form behavior such as making fields visible, mandatory or read-only.	UI Policy
4	Application Logic-3	Server-side processing where required for business rules and data consistency.	ServiceNow Business Rules / Script Includes
5	Database	Stores Incident records, configuration and user-related data.	ServiceNow Database
6	Cloud Platform	Platform hosting and application execution environment.	ServiceNow Cloud
7	File / Attachment Storage	Stores Incident attachments when used.	ServiceNow Attachment Storage
8	External API-1	Optional integration for notifications or external systems.	REST API / ServiceNow IntegrationHub
9	External API-2	Optional external service integration.	REST / SOAP API
10	Machine Learning Model	Optional intelligent classification or prediction for Incident records.	ServiceNow Predictive Intelligence (if enabled)
11	Infrastructure	Application deployment and platform infrastructure.	ServiceNow Cloud Infrastructure

Table-2: Application Characteristics

S.No	Component	Description	Technology
1	Open-Source Frameworks	ServiceNow scripting and configuration are primarily platform-native; JavaScript is used for Client Scripts.	JavaScript / ServiceNow APIs
2	Security Implementations	Role-based access, ACLs, authentication and controlled administrative access protect Incident data.	ServiceNow ACLs, Roles, Authentication
3	Scalable Architecture	Cloud platform architecture supports growth in Incident volume and concurrent users.	ServiceNow Cloud Platform
4	Availability	Hosted platform provides continuous access subject to configured service availability and maintenance.	ServiceNow Cloud
5	Performance	Client-side scripts and UI policies should be lightweight to minimize form load and response time.	Optimized JavaScript / UI Policies

Project Design Phase-II

Solution Requirements (Functional&Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-8514
Project Name	Implement Client Script&UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements – Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Control	Control Incident form fields using UI Policies based on field conditions.
FR-2	Client-side Validation	Validate user input and provide immediate messages using Client Scripts.
FR-3	Dynamic Field Behavior	Make fields visible, hidden, mandatory or read-only according to configured conditions.
FR-4	Incident Submission	Allow submission only when required validations and mandatory field conditions are satisfied.
FR-5	Maintainability	Allow administrators to update Client Scripts and UI Policies without affecting unrelated Incident functionality.

Non-functional Requirements – Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Incident form should be simple and provide immediate, understandable feedback to users.
NFR-2	Security	Only authorized users should access Incident records and configuration; role-based permissions must be respected.
NFR-3	Reliability	Client Scripts and UI Policies should behave consistently across supported Incident form scenarios.
NFR-4	Performance	Scripts and policies should execute efficiently without unnecessary server calls or noticeable form delays.
NFR-5	Availability	The solution should be available whenever the ServiceNow platform and Incident application are available.
NFR-6	Scalability	The solution should continue to support increasing Incident records and users without major redesign.
